

Familia ya watu wanne, mtu mmoja anafanya kazi, nyumba na gari: je wafanyakazi wa Amerika walikuwa na maisha mazuri kama hayo?

Zhihu • 2026-01-24

Amerika ya baada ya vita ilipitia kipindi kizuri. Katika miaka ya 1950-1960, familia ya tabaka la wafanyakazi ilihitaji mtu mmoja tu kufanya kazi ili kuishi maisha ya "tabaka la kati".

Bila shaka, aina za matumizi wakati huo zilikuwa chache kuliko sasa, lakini mapato ya mfanyakazi mmoja wa kiume yalitoshwa kununua nyumba na gari, na vinyago na nguo za watoto kwa kiasi kikubwa vilinunuliwa vipya. Je si ajabu? Tabaka la sasa la wafanyakazi wa Amerika, hata wote wawili waume na wake wakifanya kazi, pesa hazitoshi.

Kwa hiyo wengi wanauliza: maisha mazuri ya tabaka la wafanyakazi wa Amerika yalitoka wapi? Kwa maoni ya Wachina wengi, yalichukuliwa kutoka nchi nyingine. Hoja: viwanda vya China vina nguvu sasa, kwa nini maisha bado magumu? Kwa sababu China haina utawala. China ikipata utawala, hata wafanyakazi wa kawaida wataishi vizuri na gari na nyumba.

Lakini ukiwauliza wapinzani wa Amerika, watasema: kwa sababu vyama vya wafanyakazi vya Amerika vilikuwa na nguvu baada ya vita, uwezo wa mazungumzo wa wafanyakazi ulikuwa mkubwa, na shinikizo la Umoja wa Soviet lilifanya Amerika kutojiweza kurudisha mafanikio ya mageuzi ya

wafanyakazi; mambo haya yalifanya uwiano wa malipo ya wafanyakazi katika pato la jumla kuwa wa juu.

Kwa takwimu za uwiano wa mapato ya wafanyakazi, baada ya miaka ya 1980, hasa baada ya 2000, uwiano huu ulishuka.

Labor share of nonfarm business sector,¹ total compensation share of gross value added, %

Kutoka uhusiano wa mishahara na GDP kwa kila mtu: kabla ya 1980, hasa 1955-1965, ukuaji wa mishahara halisi ulikuwa wa juu kuliko GDP kwa kila mtu. Baada ya 1980, ingawa GDP kwa kila mtu iliongezeka, mishahara halisi haikubadilika.

From GDP per Capita to Median Wage 1947 to 2013/14, 1947 = 100

Kwa hiyo, kwa takwimu, kupungua kwa kiwango cha maisha cha tabaka la wafanyakazi wa Amerika kunasababishwa na tatizo la usambazaji. Lakini hii inaonyesha tu kuwa uboreshaji wa maisha ya wafanyakazi ikilinganishwa na burgesia umepungua; haithibitishi kwamba miaka ya 1960 familia ya watu wanne ilitosheka na mshahara wa mtu mmoja.

Kwa wengi, maisha mazuri ya zamani hayakuwa mazuri hivyo

Mapato ya wastani ya familia ya Amerika 1960 dola 5600^[1], na mshahara wa wastani wa mfanyakazi wa Amerika dola 4,007^[2]. Sikupata data za 1960, lakini utafiti wa 1963 ulionyesha kwamba mshahara wa wastani wa wafanyakazi wa magari wa Amerika ulikuwa dola 2.90 kwa saa, ambayo kwa mwaka (wiki 52) ni dola 5,800^[3]. Kwa hiyo, hadithi kwamba baada ya vita mfanyakazi mmoja wa kiume wa Amerika alilisha familia nzima ina msingi; wafanyakazi wenye mshahara wa juu kidogo, kwa mfano (mfanyakazi wa General Motors) — kulisha familia hakukuwa tatizo.

Lakini kwa takwimu rasmi, 1960 mshahara wa wastani wa mfanyakazi wa kiume dola 3371, wa kike dola 2152; kwa hiyo katika familia yenye mapato ya wastani, wafanyakazi wote wawili hufanya kazi, na jumla ya mishahara yao ni karibu mapato ya wastani ya familia, kidogo chini ya wastani wa wafanyakazi wa magari. Kwa hiyo hadithi ya "mwanamume anafanya kazi kulisha familia ya watu wanne" haina msingi. Familia hizo zilikuwepo, lakini kwa wafanyakazi wenye mapato ya juu kama wa magari tu. Kwa wengine, wote wawili walilazimika kufanya kazi. Kwa wafanyakazi wa rangi, mshahara wa wastani ni chini ya nusu ya wazungu; hata wote wawili wakifanya kazi, maisha yalikuwa magumu. Kwa kigezo cha umaskini cha Amerika 1966 (1960 sikupata) kwa familia ya watu wanne: dola 3335^[4], familia nyingi za Waamerika wasio wazungu zilipaswa kuwa chini ya mstari wa umaskini.

Ikiwa mishahara ingekua pamoja na tija ya kazi

Tunaweza kuchambua: ikiwa uwezo wa mazungumzo wa tabaka la wafanyakazi wa Amerika usingedhoofishwa na ubepari huria mamboleo, na mishahara ingefuata ukuaji wa nguvu za

uzalishaji, mapato ya tabaka la wafanyakazi yangukuwa yapi?

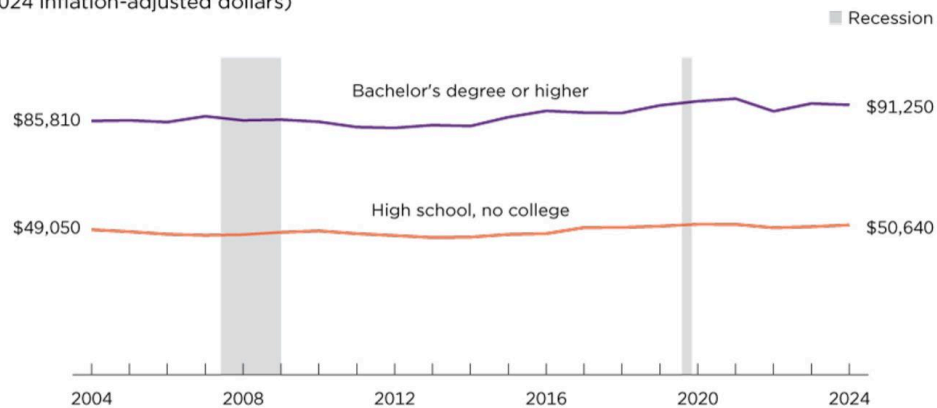

Nambari kama GDP na mishahara ni za kufikirika. Tunaweza kulinganisha Amerika ya 1960 na 2024.

Kwa dola za 2024^[5], dola 5,600 ni sawa na dola 59,313, dola 4,007 ni sawa na dola 42,441, na dola 5,800 ni sawa na dola 61,432: mapato ya wastani ya familia ya Amerika 2024 dola 83,730; hii inaonyesha katika miaka 60 mapato halisi ya familia yameongezeka 40% tu. Mapato ya mfanyakazi aliyehitimu shule ya sekondari dola 50,000; ikilinganishwa na wastani wa 1960, ukuaji chini ya 20%.

Figure 2.

Median Earnings of U.S. Full-Time, Year-Round Workers by Educational Attainment: 2004–2024

(2024 inflation-adjusted dollars)

Chanzo: <https://www.census.gov/library/stories/2025/09/education-and-income.html>

Kwa dola zisizobadilika za 2010, GDP kwa kila mtu ya Amerika 1960 dola 18,899; 2024 dola 66,356 — 2024 ni kubwa mara 3.5 kuliko 1960, lakini mishahara halisi hazikuongezeka. Ikiwa mishahara ingefuata GDP kwa kila mtu, hata kwa 80% ya ukuaji, mishahara wa familia ya kawaida ya 1960 ungekuwa $59,313 \times 3.5 \times 0.8 = \text{dola } 166,076$ — zaidi ya mara mbili ya wastani wa sasa wa 83,730; hii ni utajiri mkubwa wa kimwili.

知乎 @ 最遥远的路
fred.stlouisfed.org

Bila shaka, hii ni hali ya dhana tu. Mwishoni mwa miaka ya 1970, Amerika na nchi nyingine za viwanda ziliingia katika stagflation, kiwango cha faida kilishuka, ukuaji dhaifu. Bila mageuzi ya ubepari huria mamboleo kurejesha kiwango cha faida, isipokuwa mapinduzi ya ujamaa, ukuaji ungekuwa mgumu kurejesha.

Kwa nini maisha yanazidi kuwa magumu?

Ingawa mishahara ya wafanyakazi wa Amerika haikuongezeka sana, haikufikia hatua ya wawili kushindwa kulisha familia. Kwa nini maisha yamekuwa magumu sana?

Hebu tuangalie matumizi ya familia ya Amerika 1960. Bidhaa dola 1234, usafiri 770, makazi 658, tiba 340, bima ya kibinafsi 299; kwa dola za 2024: 13,070, 8,155, 6,969, 3,601 na 3,167. Kwa data ya 2024^[6]: ikilinganishwa, matumizi ya chakula dola 10,169, usafiri 13,318, makazi 26,266, tiba 6,197, bima ya kibinafsi 9,797; bidhaa na usafiri ni matumizi ya lazima; zaidi ya hayo, makazi yameongezeka dola 20,000, tiba karibu 2,600, bima 6,630; jumla 29,230. Ikiwa tutaongeza tofauti hii ya karibu dola 30,000 kwa mishahara wa wastani wa mfanyakazi wa dola 50,000, tutakaribia wastani wa familia ya 2024 wa dola 83,730. Kwa wafanyakazi wa magari wenye mapato ya juu, mapato yao ya kibinafsi kwa dola za 2024 ni 61,432; pamoja na 29,230 — dola 90,000; inatosha kabisa kwa familia.

Table 12. Comparison of income, expenditures, and changes in savings as reported in the 1960-61 CES with estimates based on CES reports adjusted by Office of Business Economics income distribution of families and unrelated individuals, total urban and rural United States

Category	Average per CU		Percent distribution of expenditures		Aggregate (millions)

Account balancing difference -----	-186	-156	-	-	-10,287	-8,744	1,543

¹ Adjusted to (a) exclude 1960 urban data; (b) reflect increase from 1960 to 1961 in estimated number of consumer units (from 55,306,000 to 56,003,000); and (c) reflect CBE distribution of families and unrelated individuals among income classes. See text, pp. 56-58.

² Excludes occupational expenses (averaging \$39) and includes gifts of cash from persons outside the consumer unit (averaging \$46), which account for difference in average money income before taxes from that shown in table 13.

NOTE: Because of rounding, sums of individual items may not equal totals.

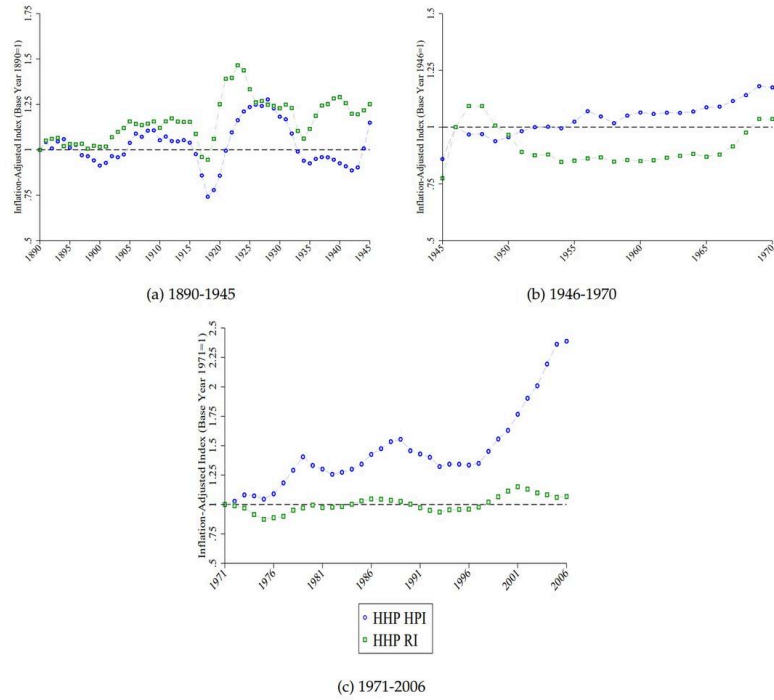

知乎 @最遥远的路

Hapa chini uchambuzi wa makazi na tiba.

Makazi

Bei za nyumba za Amerika (bluu kwenye picha hapa chini) hazikuongezeka kutoka baada ya vita hadi 1970; kodi (kijani) pia ilikuwa ya chini.

Figure 4: HHP RI and HPI

Note: These figures plot the baseline real housing price index (HPI) and rental index (RI) aggregated by population. HPI is based on the Officer-Williamson (https://measuringworth.com/) CPI.

Chanzo: The Price of Housing in the United States, 1890-2006

<https://www.philadelphiafed.org/-/media/frbp/assets/working-papers/2024/wp24-12.pdf>

Lakini kipindi cha uchambuzi kinaishia 2006, kwa hiyo ongezeko la kodi linaonekana dogo. Tangu 2000, kodi imezidi CPI, kukusanya 40%; katika miji mikubwa kama New York na San Francisco, zaidi. Ikilinganishwa na kukodi, bei za kununua zimeongezeka zaidi. 1960, bei ya wastani ya nyumba dola 11,900; kwa dola za 2020, 104,166. Kufikia 2020, wastani dola 336,900^[7], ikiwa ni ongezeko la mara 3.23 kutoka 1960; Hesabu za serikali za Amerika kulingana na matumizi ya familia zinakaribiana — asilimia ya umiliki wa nyumba za familia za Amerika ni zaidi ya 60%.

U.S. Rent Prices Have Exceeded Inflation by 40% Since 1985

Rent Prices vs. Inflation

Tiba

1960, uwiano wa matumizi ya tiba ya Amerika katika GDP ulilingana na nchi nyingine; kufikia 2016, ulizidi nchi nyingine kwa mbali, lakini umri wa maisha ulikuwa chini — tiba ya Amerika ni ghali na haina tija.

The U.S. spends more of its GDP on health care but has worse results than OECD nations

*Of 10 OECD nations with the largest per capita GDP for which data were available in all years

Source: OECD

知乎 @最遥远的路

Chanzo: <https://www.wsj.com/articles/why-americans-spend-so-much-on-health-care-in-12-charts-1533047243>

Kwa nini tiba ya Amerika ni ghali? Kampuni ya bima ya kibinafsi United Healthcare ilichambua sababu: ghali ya matibabu ya hospitali na dawa zilizoagizwa^[8]. Sababu za kina ni mbili: kwanza, makampuni ya bima ya afya ya Amerika ni mengi na hayajaunganishwa, hivyo hayawezi kufanya mazungumzo ya manunuzi kama mnunuzi mmoja. Pili, watoa huduma za tiba wa Amerika wengi ni hospitali za kibinafsi, na serikali ni vigumu kudhibiti bei. Wasomi duniani kote wanapojadili madhara ya tiba ya kimasoko, wanaitumia Amerika kama mfano mkuu.

Utafiti wa Kaiser Family Foundation (KFF) 2024: sehemu kubwa ya matumizi ya tiba ya Amerika inaenda hospitali na madaktari. Karibu theluthi kwa matibabu ya ndani, karibu 20% kwa madaktari na kliniki. Ikilinganishwa na nchi tajiri nyingine, matumizi ya juu ya Amerika kwa matibabu ya ndani na nje yanaelezea sehemu kubwa ya tofauti. KFF pia ililinganisha Amerika na nchi nyingine: hakuna ushahidi kwamba Waamerika wanatumia huduma zaidi. Kwa kweli, muda wa kukaa hospitalini ni mfupi, na ziara ni chache. Kwa hiyo: "Sehemu kubwa ya tofauti ya matumizi ya tiba kati ya Amerika na nchi zinazofanana inatokana na bei za juu, si matumizi ya juu ya huduma." Tangu 2009, bei za wastani za

rejareja za dawa zilizoagizwa za chapa zimeongezeka zaidi ya mara mbili baada ya kurekebisha mfumuko. Katika muongo uliopita, bei ya mwaka ya dawa maalum iliongezeka mara tatu — kutoka karibu dola 18,000 hadi zaidi ya 52,000.

Je mfanyakazi wa China 2024 anaweza kuishi kama mfanyakazi wa Amerika 1960?

1960, uwiano wa miji wa Amerika 70%, viwanda 28.4% ya GDP — nguvu kubwa zaidi ya viwanda duniani. 2024, uwiano wa miji wa China 67%, viwanda karibu 26%. 1957, ziada ya biashara ya Amerika dola bilioni 6.1 (bei za mwaka huo)^[9], ambayo kwa dola za 2024 ni dola bilioni 6,610. Kwa 2024, ziada ya biashara ya China ni dola trilioni 1.2. Kwa kuzingatia kwamba jumla ya biashara ya dunia katika miaka ya 1960 ilikuwa ndogo sana kuliko 2024, kwa ujumla Amerika ya wakati huo, kama China ya sasa, ilikuwa nchi yenye viwanda imara inayosafirisha bidhaa nje. Kwa hiyo, kufananisha China ya sasa na Amerika ya 1960 ni jambo linalofaa.

Katika jibu la awali nilikokotoa uzalishaji wa thamani iliyoongezwa kwa saa. Hapa ninatumia data hii kuchambua: ikiwa China itafikia uwiano wa mapato ya wafanyakazi wa Amerika 1960, je kiwango cha maisha cha wafanyakazi wa China kitalingana na wafanyakazi wa Amerika?

Kwa mfano wa 2024: GDP ya China yuan trilioni 1,349,084. Thamani iliyoongezwa inahitaji kuondoa uchakavu wa mali za kudumu; kwa kuwa GDP ya mapato haijachapishwa kwa miaka (kwa sababu inajumuisha uwiano wa mapato ya wafanyakazi, suala nyeti), tunakadiria: uchakavu wa mali za kudumu 15%. Thamani mpya iliyoundwa: $1,349,084 \times 0.85 = \text{yuan trilioni } 1,146,721$. Saa za kazi za mwaka: $73,439 \times 2555 = \text{saa milioni } 18,763,664.5$, yaani bilioni 187,636.645 za saa. Kugawanya: $1,146,721 \text{ trilioni} / 187,636.645 \text{ bilioni} = \text{yuan } 66.11$. Chanzo: jinsi ya kutathmini dhana ya “tabaka la kati bandia” ya Ma Dugong? Kwa “Mwaka wa Takwimu wa Watu na Ajira wa China 2024”, Wachina hufanya kazi saa 49 kwa wiki, saa 2555 kwa mwaka. Kwa yuan 66.11 kwa saa, thamani ya jumla ya mwaka yuan 168,911. Kwa uwiano wa mapato ya wafanyakazi wa Amerika 1965 wa 65%, mapato ya mwaka yuan 109,792. Kwa usawa wa nguvu ya ununuzi wa Benki ya Dunia, yuan 1 = dola 3.5; malipo ya wastani ya mfanyakazi dola 31,369; kwa dola za 1960, karibu dola 2,962 — juu kuliko mshahara wa wastani wa mfanyakazi wa Amerika 1960 (dola 2,571). Ikiwa wawili wanafanya kazi katika familia ya watu wanne, mapato dola 5,924 — juu kuliko dola 5,600 za familia ya Amerika. Ikiwa mahusiano ya ndani ya China yatarekebishwa na mizani ya nguvu kufikia kiwango cha Amerika 1960, mapato ya wafanyakazi wa China 2024 hayatakuwa chini ya wafanyakazi wa Amerika 1960.

Kwa kiwango halisi cha maisha: matumizi ya tiba ya China yanalingana na Amerika 1960, lakini ununuzi wa nyumba ni wa juu; ikiwa bei za nyumba zitapungua hadi karibu mara mbili ya mapato ya mwaka ya familia (11,900/5600), yaani yuan 400,000 kwa nyumba ($109,792 \times 2 \times 2$), kiwango halisi cha maisha cha tabaka la wafanyakazi wa China kitakaribia Amerika. Hili ni gumu kwa nchi inayotegemea mapato ya ardhi.

Kwa ujumla, kabla ya nchi kukamilisha viwanda, maendeleo ya nguvu za uzalishaji ni muhimu zaidi — kuongeza “keki”. Lakini baada ya viwanda kukamilika, suala la kugawa keki linakuwa la dharura. Historia ya Amerika baada ya 1980 inaonyesha: kuendelea kuongeza keki si lazima kumaanisha maisha bora. Ikiwa bei za makazi, tiba na matumizi mengine yasiyo ya lazima hazitadhibitiwa, maisha yanaweza kuwa mabaya zaidi.

Marejeo

- [^] Tangu 1947, mapato ya jumla ya familia kwa dola za sasa yameongezeka kutoka 3,000 hadi 5,600 (85%). Kwa dola zisizobadilika (1960), mapato ya wastani ya familia yameongezeka kutoka 4,000 (1947) hadi 5,600 (1960) — 40%.

[9] Ziada ya biashara ya Amerika 1957: dola bilioni 6.1 — Fed ya St. Louis

中文原文: In 1957, the United States experienced its only payments surplus of the 1950's (Table 2). As shown in Table 3 the major cause of this over-all surplus was the exceptionally high level of merchandise exports providing a trade surplus of \$6.1 billion and a surplus on goods and services of \$5.8 billion.
